HiveBoard - Technical Support FAQ

1. Login problems

Use the Forgot Password link on the login page. The reset link is valid for 30 minutes.

After 5 wrong password attempts the account is locked for 15 minutes. Wait and try again, or reset the password.

If two factor authentication codes are not accepted, check that your phone time is set to automatic.

2. App crashes and slow performance

Update to the latest version of the app first. Most crashes are fixed in updates.

Clear the app cache from Settings, then restart the app. On the web, hard refresh with Ctrl+Shift+R.

Supported browsers are the latest two versions of Chrome, Edge, Firefox and Safari.

3. Sync issues

If boards do not sync, check your internet connection and log out and back in once.

Sync can take up to 2 minutes on large boards with more than 500 cards.

4. Data and API

You can export all your data as CSV or JSON from Settings, then Data Export. Exports are ready in a few minutes.

The API allows 100 requests per minute on the Pro plan and 500 per minute on Business. Basic has no API access.

Live service status is shown on the status page. If the status page is green and the problem remains, contact support with a screenshot.
